

Energy Use Breakdown

Building Type: Outpatient Healthcare

Outpatient healthcare buildings are spaces used as diagnostic and treatment facilities for outpatient care.

The chart on the right shows the average energy use for buildings used for outpatient healthcare. **Use the chart to understand your building's typical energy usage and find ways to conserve and save.** See the energy tips below for ideas on how to conserve in the largest use areas.

Percent of total major fuel consumption (Btu) by end use, 2012

SPACE HEATING

Educate occupants on turning down the thermostat when leaving for the nights or when building is unoccupied. Open window coverings to warm the space with sunlight on sunny winter days.

VENTILATION

Good ventilation is critical for creating good indoor air quality at your organization. Keep your HVAC working well by getting regular tune-ups, changing filters and keeping your system free of dust.

LIGHTING

Encourage staff to turn off lights when leaving empty rooms. Add lightswitch stickers as reminders to turn off lights or install lighting sensors that turn off lights automatically when rooms are unoccupied.

COMPUTING

Encourage staff to turn off monitors when not in use, turn on sleep mode, and power down computers at the end of the day. Add stickers to monitors and/or calendar invites to remind staff to power down.
